Abstract

The invention relates to a method and system for delivering the archived personal content of mobile users and/or material selected on the basis of ~~said~~the archived personal content. At least one remote data repository is connected to the telecommunications system, storing therein information including personal content including data objects and/or information extracted from ~~said~~the objects. At least one of the repositories is assigned for each mobile terminal. Further, external data is stored somewhere in the network. Items of data are retrieved from ~~said~~the remote data repository, the items including an object and/or information extracted from an object. Then at least one predetermined criterion is read, the criterion defining a relationship between the retrieved data and the external data. If ~~said~~the relationship fulfills a predetermined condition, data to be delivered to the mobile terminal is selected and then delivered to the mobile terminal.
